

SEP – Joeys section (Features LAB02)

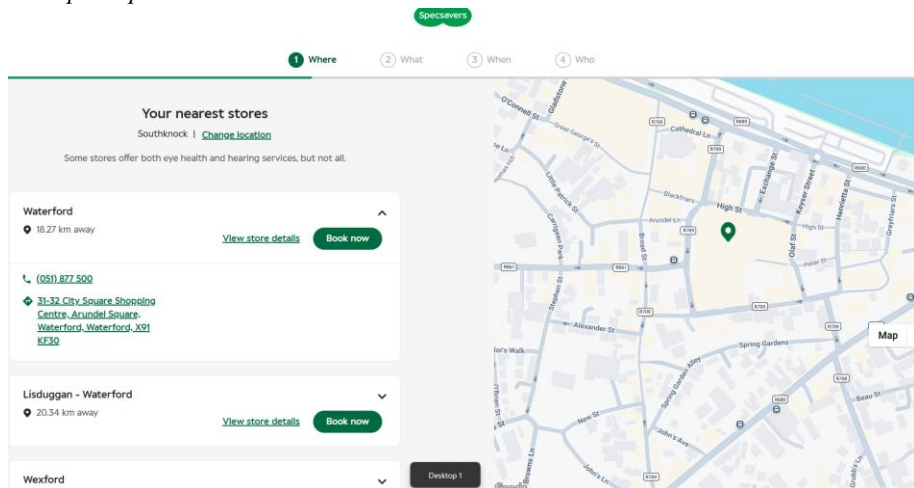

The program I will be presenting and outlining here in this document will be 1/3 of the final product where users will be able to book prioritised parking.

This program entails the user's ability in booking in advance parking at SETU campus (Waterford). Often after a certain, quite early and unsuitable time window on college mornings, parking catered for SETU staff and students is very scarce, in fact, almost unattainable. Staff or student alike, however, if they want to avoid the anxiety of not finding a parking space, or at least at a timely expense circulating the carpark seeking a car leaving a slot, and under no condition can they accept the possibility of not finding a parking space (imminent exam, mandatory punctuality) , they can book a slot in advance.

General UI overview:

- SETU login / register. In this initial view, the user will be posed with entering their account details or creating an account. If the email isn't a verified SETU email (within the specific email domains: '@setu.ie / @wit.ie') the account details entries will be invalid.
- Profile Dashboard: Once passed the initial page, a dashboard will present itself. Assuming it's a newly made account, there will be a display of your default / initial credit count (which decreases corresponding to bookings placed). Every week the credit count will reset. Below and centred in the GUI, the user will see a make a booking option / bar.
- Booking Steps: The next view will reveal a list of the SETU campus to choose (SETU CORK ROAD / COLLEGE ROAD).

Example: Specsavers GUI

- ⇒ The next view will be a calendar of the current week with toggle arrows implying the user can book as far as 7 days from now (in case the user is making a booking on Thursday for instance, otherwise they'd be limited to Friday).
- ⇒ In the day columns, there'll be a status displaying whether there's availability or not. Once a day is selected, the user will be placed on the final transactional view. Card details can be saved for user efficiency in future. After details are entered the user is prompted with at the end of the page, confirm booking.
- ⇒ After the booking process is completed, the user is sent back to the dashboard where a certain number of credits are indicated to have been used and an email, containing a QR code (or the like) is subsequently sent to the user to be scanned at the prioritised parking gate self-scanner.

Special Features / Details

- Automatic Parking Spot Release: If the user fails to show up on the day it booked, a penalty will be inflicted of a deduction of 4 points (initial weekly points are 6 points, two points per day, three days a week to book. Again this system ought to only cater to SETU users with specific reasons to get a parking spot, the credit system would be made redundant if a user could book a slot every day of the week which essentially a user shouldn't have to). This means they will have lost the equivalent of two days booking credit fees. This is to prevent used spaces being on paper vacant, when in actuality, other users' opportunities are being thwarted if the system reads no spaces when there practically is room.
- Guest and Visitor Access: Although SETU user authentication may suggest the service is exclusive, it's not entirely based on strict conditions. Users on the system can book a slot on their behalf for a guest (guest speaker for career day for instance to

represent a faculty or company etc). However, guest / visitor bookings are limited to consecutive, frequent use. The SETU user will be asked to provide the guest / visitors full name and email which then a personalised email will be sent for confirmation.

This is to have a record of the person by which if this person is frequenting as a guest, the SETU user representing will receive a strict credit penalty.

- Self – service portal: In a menu bar above the dashboard there'll be an option to view 'my bookings'. Within this view a student will be posed with two options, cancel their booking or modify it to suit a different day for instance.
